

BC VISION

Solver:

An Introduction

At Professional Advantage we are committed to helping organisations achieve more with technology. As such, we are always reviewing our solution portfolio to ensure that we are providing our clients with the best technology available to achieve more. We are very pleased to announce that we have partnered with Solver to bring their Cloud Corporate Performance Management solution to our clients. With Solver's pre-built connectors for Dynamics 365 Business Central, this solution offers the perfect 'next step' to the standard reporting and budgeting available for all Business Central users.

We know that Financial Managers and Executives in growth-focused organisations are looking to maximise decision-making capabilities for success in the ever-growing, competitive marketplace. Solver is an innovative and easy-to-use Corporate Performance Management (CPM) solution that supports these objectives by offering:

- Flexibility – To deploy even the most advanced reports, planning models, and dashboards allowing for analysis of both financial and operational data.
- Scalability – To handle large data sets and 10s to 100s of users.
- Availability – 24/7 availability through global, secure cloud platform.
- Connectivity – Automated integration to all important data sources.
- Accessibility – Anywhere, anytime with just a browser and Internet required.
- Affordability – To provide excellent return on investment (ROI).

Ranked by users as one of the top cloud CPM solutions in the world, Solver is built for the rapidly evolving demands of companies aspiring to thrive in the current marketplace. Solver provides a single, cloud-based solution that automates reporting, consolidations, and budgeting and forecasting processes, and supports faster and better decisions based on key information from across your organisation's data sources.

Solver's cloud-software suite provides four essential modules for your organisation:

Reporting:

While all end-users run reports and drill-down using their web browser, power users enjoy the industry's most flexible, cloud-connected Excel add-in to design report templates. The result is world-class report formatting and completely automated, web-based access and self-service analysis.

Planning:

Budgeting and forecasting processes are simplified and automated with unlimited users entering their budgets securely in their web browser, while the budget manager has real-time access to review, approve, consolidate, and share the final versions with executives in high-quality report books.

Dashboards:

Solver directly integrates with Microsoft Power BI. This means that managers can maximise their analysis and decision-making by having fully integrated, cloud-based reports and stunning dashboards at their fingertips.

Data Warehouse:

Analysis and quality decisions are only as good as the underlying data. The Solver Data Warehouse is designed to store all your important financial and operational data, serving it to Solver's Reporting, Planning, and Dashboard modules, and ultimately providing users with "one version of the truth".

Solver's modules can be used individually or together as a complete Corporate Performance Management (CPM) suite based on your company's unique requirements and priorities.
