

THE GP ADVANTAGE

Solver and Reporting

Solver's cloud suite offers modern, dynamic reporting with out-of-the-box integration to your Dynamics GP (ERP) system. The easy-to-use and flexible report writer offers cloud-connected Excel report design with a modern browser-based web portal that provides finance professionals and end-users with powerful financial and operational reporting capabilities in a variety of layouts and presentation formats.

Your power-users can design virtually any type of report using Solver's cloud connected, market-leading Excel add-in to create the report templates. The result is dynamic, parameter-driven reports that executives and department heads can run on-demand in Solver's web portal at anytime and from anywhere with just an internet connection and a web-browser. You can eliminate manual report exports and formatting in spreadsheets and move to a modern, automated reporting process. Users can refresh reports on-demand and drill down to detail, answering their own questions without needing to contact the accounting department for answers.

Enjoy user-focused reporting features such as:

- **Excel Design, Web Delivery:** Create reports using a modern Excel add-in and deliver them as on-demand reports in a flexible cloud-based web portal application.
- **Template and User-Defined Reports:** Choose from a wide range of templates or create a report from scratch with custom parameters.
- **Financial Statements, Operational Reports and More:** Generate the documents you need for parameter-based, automated financial and operational reporting.
- **Workflow for Month End Close and Consolidations:** Automate your workflow in Solver's Reporting software for financial consolidations and frequent tasks.
- **Report Books and Archive MS Office Documents:** Export presentation-quality reports into Microsoft PowerPoint and Word documents without the need for manual manipulation.
- **Allocations:** Use features across the Solver Suite to predict and create monthly or budget allocations for P&L's and cost control at the department-, customer, or product level.
- **Currency Conversion:** Create daily or monthly rates for currency conversion to present your reports in any currency, including side-by-side currency comparisons and results of budget-to-actual exchange rate effects.
- **Unlimited Organisational Trees:** Make as many organisational trees as you need to view and analyse your data clearly for statutory and management consolidations.
- **Automatic and Manual Eliminations:** Perform eliminations automatically and manually in user-friendly input forms to save time while maintaining an accurate idea of your results, both pre-and post-eliminations.
- **IFRS/GAAP and Other Consolidation Adjustments:** Adjust your data with full audit trail throughout the consolidation process to meet standards such as GAAP and IFRS.
- **Fully Integrated with Solver Suite:** Work across Solver Reporting, Budgeting, Dashboards, and Data Warehouse with ease.
- **Ad Hoc Reporting:** Self-service tools that answer important business questions instantly. Whenever new questions arise or additional detail is needed, users can create an on-the-fly ad hoc report, without having to rely on other teams for assistance. Extremely easy to learn.
