

Discover Dynaway

BY PROFESSIONAL ADVANTAGE - 26 March 2024 - 4 MINS READ

Dynaway Enterprise Asset Management (EAM) is a combination of software applications inside Dynamics 365 Business Central that enables asset-intensive businesses to maintain and control operational assets and equipment.

The aim is to optimise the quality and utilisation of assets throughout their lifecycle, increase productive uptime, and reduce operational costs.

Professional Advantage is pleased to confirm that Dynaway is now available to our Business Central clients through their partnership with us.

Key Features:

- Manage and organise your assets with relevant information and documentation in one place.
- Create and manage your corrective maintenance workflows.
- Configure and manage your preventive maintenance schedules.
 - Calendar-based.
 - Usage-based.
 - Condition-based.
- Effective scheduling of workloads on graphical boards.
- User-friendly mobile work order execution.
 - Document through checklists and pictures.
 - Register labour, material, and other expenses.
- Deploy and manage safety procedures.
- Packaged reports in Excel and Microsoft Power BI.
- Flexibility to customise reports in Excel and Power BI.
- Seamlessly operating within Business Central and connected to:
 - Inventory
 - Purchase requisitions managed.
 - Resources.
 - Manufacturing.
 - Fixed Assets.
 - Vendors.
 - Jobs (projects).
 - Time Sheets.

Business Outcomes:

- **Up to 75% time saving** on completing work orders.
- **Boost productivity** by planning and scheduling workloads effectively.
- **Increase asset utilisation** by decreasing downtime through preventive maintenance planning.
- **Ensure compliance with industry regulations** by having an audit trail and approval processes in place.
- **Less administration** by centrally managing documents, checklists, warranties, and other documentation relating to assets.
- **Enabling smarter and data-driven decisions** through accurate cost tracking and consolidation of data.
- **Consistent and accurate inventory levels**; all in one inventory and automatic inventory adjustments when completing work orders.
- **Streamlined procurement process**, triggering purchase orders for necessary parts and supplies when maintenance activities require them. This ensures timely acquisitions and minimises delays.
- **Create a safer workplace** by managing safety, risks, lockouts, and work permits.
- **Motivate employees** through digitalisation and minimising manual tasks.

Prerequisites:

The only requirement for Dynaway is to be on the SaaS version of Microsoft Dynamics 365 Business Central.

Users using Dynaway EAM for Business Central require both a Business Central user license and a Dynaway EAM for Business Central user license.

How To Proceed:

Dynaway EAM for Business Central can be downloaded from Microsoft AppSource directly in Business Central. There are multiple apps available that provide additional functionality, but to get started you only need the app: Dynaway EAM. All applications come with Assisted Setup guides for the configuration process.

Once downloaded and installed, you can register for a free-forever Starter license.

About The Partnership

"Professional Advantage has proven to be an extremely easy-to-work-with organisation with in-depth industry knowledge. It goes without saying that we are more than happy to work with Professional Advantage and recommend their services. We already have three clients that are live with or currently implementing Dynaway EAM for Business Central, and the team at Professional Advantage has already brought feedback and influenced our product roadmap greatly, with new features already delivered.

The partnership still has much untapped potential for using EAM as a competitive advantage towards asset-intensive prospects, and we, at Dynaway, are thrilled to have Professional Advantage as a beachhead to the Australasian market." Kasper Shik Thomsen, Business Development Director at Dynaway.

About Dynaway

Dynaway A/S is a Danish software company founded in 2000, and has always been focusing on developing and commercialising Enterprise Asset Management software exclusively for Microsoft's business applications.

The claim that Dynaway is the default Enterprise Asset Management solution provider for Microsoft's business applications is supported by the fact Microsoft has acquired Dynaway software products previously and built them into the Dynamics 365 portfolio.

The Asset Management module that is now part of the Dynamics 365 Finance and Supply Chain suite was developed by Dynaway, and we continue to be the leading authority on Asset Management, offering training and implementation services to Microsoft's customers through referral.

Dynaway consists of two product lines—EAM for Finance and Supply Chain (Finance and Operations), and EAM for Business Central—and has offices in Denmark, the United States, and Poland.
